AutoCAD Viewer is designed to display features of AutoCAD that have no AutoCAD equivalents. AutoCAD Viewer does not contain AutoCAD itself. To open a file in the AutoCAD Viewer, just double-click the file's icon. If you need to perform a similar function on the AutoCAD main menu, click on File > Open > AutoCAD Viewer > Other Viewers. Here,

you can perform the same function on many other programs, including, but not limited to, Adobe Photoshop and Fireworks. When you select the Viewer in the main menu, the following dialog box appears: AutoCAD Viewer Dialog Box If you have activated the Design Environment in AutoCAD (discussed in the next section), you can choose which work environment to display in the Viewer. Click the down arrow next to the Work Environment selection, and then choose a new environment for your Viewer. When you click the OK button to close the dialog box, the contents of the file you opened in AutoCAD will be displayed in the Viewer. If you are in the standard view, which is the default setting for the Viewer, the contents of your file will be displayed in a window on the screen. If you are in the thumbnail view, AutoCAD will display a series of thumbnails of the content of your file. If you do not see the Viewer on the main menu, you can activate the Viewer by clicking on the File menu and choosing Open > AutoCAD Viewer > Other Viewers. You can close the Viewer when you are finished by clicking the Close button at the top of the Viewer. The Viewer can be

Glial cell line-derived neurotrophic factor-induced tubuloglomerular feedback effect: comparison of rat glomerular and medullary collecting duct. Glial cell line-derived neurotrophic factor (GDNF), a member of the transforming growth factor-beta superfamily, is a growth factor for developing neurons and for renal tubular cells, including the principal cells of the thick ascending limb of Henle's loop (TAL). Recent evidence indicates that GDNF is a potent autocrine/paracrine growth factor for the principal cells of the rat and rabbit glomerular afferent arteriole. We now report that GDNF induced a

dose-dependent increase in glomerular filtration rate in vivo. The increase in glomerular filtration rate was significant as early as 2 h after a single injection and was maintained for at least 72 h. Injection of GDNF (1 or 5 microg/g body weight) significantly elevated the filtration fraction as early as 1.5 h after injection, and this effect was maintained for at least 48 h. GDNF had no effect on glomerular capillary pressure or renal blood flow, and it did not alter the density of the glomerular basement membrane. After the kidney had been perfusion fixed for electron microscopy, a significant increase in the length of the podocyte cytoplasm and in the surface area of the filtration slits was observed in the glomeruli from the GDNF-treated animals. A significant increase in the cell volume of the outer and inner medullary collecting duct was also observed in the GDNF-treated animals. We conclude that GDNF produces a prolonged increase in the glomerular filtration rate by stimulating tubuloglomerular feedback.
