IpNetTracker Crack + For Windows

IP Tracker is a small and easy to use application that allows you to view detailed information of a workstation. You can see who is logged in to your computer and which programs they are using. You can even see the current IP and it's most recent DNS name for that machine. As IpNetTracker is compatible with Windows 2000 and later you can simply install it on a target machine and then install the software on other workstations that you need to monitor. IpNetTracker Overview: IpNetTracker is a small and easy to use application that allows you to view detailed information of a workstation. You can see who is logged in to your computer and which programs they are using. As IpNetTracker is compatible with Windows 2000 and later you can simply install it on a target machine and then install the software on other workstations that you need to monitor. Features: * Notify You When Someone Logs On To Your Computer * Notify You When Someone Closes The Browser Window * Shows All Logged On Users By Computer Name * Shows All Programs Currently Running On The Computer * Shows Current IP and DNS Name for All Computers * Notification by Email, Text Message, or E-mail * Works In Demo Mode * Doesn't Install Any Software * Easy to use * Works On Any Windows 2000 or later Computer Running the free IpNetTracker is easy. Step 1 Download the IpNetTracker and unzip it by double clicking on it. Step 2 Run IpNetTracker and wait for it to load. Step 3 Select the computer from the list of your workstations and click on Go. Step 4 A window will open up showing all information about the computer, which includes what programs they are currently running, the status of the workstation, the IP address and the most recent DNS name for the target workstation. Step 5 This is how the interface looks. Easy to use, this IpNetTracker is user friendly and very easy to use. The only downside is that the program takes a while to start up and to load the information. IpNetTracker Pros: * Notify You When Someone Logs On To Your Computer * Notify You When Someone Closes The Browser Window * Shows All Logged On Users By Computer Name * Shows All Programs Currently Running On
