ObjectARX is a cross-platform library that provides a clean and object-oriented API (application programming interface) that allows the creation of applications with a high degree of extensibility. It can be used as a.NET framework. Design Language and Type System In 2015, an improved language and typing system were added in a new Autodesk Design Review version. This is called Revit. A powerful alternative to traditional CAD systems is AutoCAD Architectural Desktop, in which the use of variables, arrays and user-defined functions are important. The name, 'architectural', has been used to differentiate CAD systems that have been developed to satisfy the needs of architects or other building professionals. Traditional CAD systems are sometimes referred to as 'point of sale' systems, a term implying a limited audience. Navigation The concept of navigation is also changing. In 2005 the company released a new version of Navigation, named Navisworks. New features include 3D Navisworks Navisworks Explorer and Navisworks Space Viewer. Q: PHP - Error when trying to convert array into JSON I'm trying to convert an array into json using the following code, but I keep getting the error: Warning: Invalid argument supplied for foreach() Here's the code: $scores = $this->stmt->fetchAll(PDO::FETCH_ASSOC); $scores_array = array(); foreach($scores as $score) { $score_array = array('name'=>$score['score']); $scores_array[] = $score_array; } return json_encode($scores_array); Is there a way to make this code more efficient? What am I doing wrong? A: You don't need to use foreach for that.
