I've noticed a problem with the "Active" list on meta. I'm assuming it's a bug. When I edit a question I get my own (edited) question in the "Active" list and the original (un-edited) one doesn't. Is there any way to get the original (un-edited) question to the active list?  
A: Once the question is edited, the top 77a5ca646e

## App-V Unattended Installer Serial Number Full Torrent Download

App-V Unattended Installer will deploy and configure a complete App-V solution on multiple client computers in a matter of minutes. This trial version enables users to conduct basic tests and evaluate the functionality and scalability of the App-V service prior to purchasing the license for the product. The provided scripts will simplify and automate the process of deploying and configuring the App-V client, server and gatekeeper components, enabling users to focus on other more important tasks. Download App-V Unattended Installer Program Location: C:\Program Files (x86)\Microsoft\AppV\ App-V Unattended Installer license key: Download License Key A: From this post: Unattended deployment is the process of deploying a computer or workstation configuration where a user does not need to interact with the machine. This can be used for a number of applications, but is most useful for server deployment. You can set up unattended deployment on server 2012 R2 to install and configure a whole bunch of server roles at once. For this to work the server must be running in Server Core mode. To set up a server in unattended deployment mode, perform the following steps: Log in to Server Manager. Select Configure Automatic Deployment. Select the server role or roles that you would like to deploy automatically. To determine the roles that are available to select, select all of the server roles that are available on the server. In the Deployment Wizard, select OK. When the deployment is complete, server will reboot. You will be able to add unattended deployment to the server using the Group Policy Management Console. Q: Why does the button in the system prefs crash my app? So, I'm trying to access the keyboard shortcut settings through the system prefs on the iPhone. But, when I try to start the preferences, the app crashes with no error. I haven't been able to find any information on this. Here's my code: `NSArray *keyboardShortcuts = [NSArray arrayWithObjects: @"~", @"/,","/", @"√",`

### What's New in the App-V Unattended Installer?

App-V Unattended Installer is a handy and reliable application designed to help administrators to install and setup a complete App-V environment in 30 mins only. Simple, don't need to run the App-V Test Center first. One-click deployment. All packages are on a nice folder tree, just one click to download and install all packages. No any configuration steps and no any detailed description. It's just few simple steps. This App has a simple Metro UI. How can I create the batch script below? Please let me know if you need further information. Thank you for your help. A: You could use a powershell script, but a batch script would do what you want. This is a batch script I just whipped up, I haven't tested it, but it should work. The "Application on Demand" section is new, but it should be easy to convert it to an unattend. `@echo off set APPV4_PACKAGES=commsvc,commsvc_core,commsvc_migration if not`

---

```
"%CD%"=="%~dp0" ( cd %~dp0 ) for %%a in (%APPV4_PACKAGES%) do (
%systemroot%\system32\inetsrv\appcmd set app +app "%~dp0TMP\Application on Demand"
-product "Microsoft-App-V %~nxa" -applicationpool "App-V Client Application Pool" )
```

pause

Q: How to set a default value for an input in angularjs? I want to set default value for my inputs. Now i want to set the "id" input as "4" as a default value. Please help me how to do that.

A: By default you can't set an input's default value, because there is no such thing as a default value. It should be set by the user when the input is visible. There is a built-in directive `ng-minlength` that does this for you, but you could have a look at this post [Microsurgical vs laser in situ keratomileusis in high myopia: 25-year follow-up](#). The purpose of this study was to compare the clinical outcomes after photorefractive keratectomy (PRK) using the microkeratome and the laser for correcting myopia in one of the patients groups. A retrospective study was conducted. Two hundred one consecutive patients with myopia (spherical equivalent, -5.00 to -15.
