The new Smart Guide feature lets users easily create and align a secondary viewport and change its size without moving objects or moving or resizing the actual drawing. 2D and 3D Text: The 2D Text feature enables users to place text in a drawing, change its size, style, color, and font, and use text anchors. The 3D Text feature enables users to create text and text objects that can be rotated or moved in 3D space. The macro file stored in a source file may contain: A user interface component One or more control blocks Visual Basic statements that describe how the macro or control block will be implemented. The VBA program module may contain: Public statements: These are declarations that define the visibility of the function or variable to the rest of the script. Function

statements: These are statements that are actually doing the work of the script. They contain a function, loop, property, or procedure name. These are the statements that will be executed when the macro is used. Procedure: A procedure is a subroutine that is stored in a program module. Procedure declaration: Procedure statements are usually started by the following command: Dim. They may also be started by a call command with the procedure name as its argument. Command: A command is a command line string that tells AutoCAD what to do. In AutoCAD, commands are one of the most versatile tools for creating and editing drawings. The code may be triggered in one of several ways: When the execution is requested When a command is received When a drawing file is opened When a menu option is selected When an option is enabled When a drawing object is dragged onto the design surface When a drawing object is moved When a drawing object is modified When a drawing object is dragged into an area of another drawing object When a drawing object is activated When a drawing object is released When a drawing object is zoomed When a drawing object is locked When a drawing object is unlocked When a drawing object is repositioned When a drawing object is automatically hidden or automatically displayed When a drawing object is moved from one block to another When a drawing object is copied When a drawing object is deleted When the drawing object is dragged onto the design surface When a drawing object is ca3bfb1094
