Six new gameplay features were unveiled today, including Create-a-Play, a new mode where you can create a play from scratch and perform, fight and score as your custom team on full-length FIFA Football pitches. Five teams were selected for Create-a-Play's first gameplay preview: Juventus, Barcelona, Bayern Munich, Manchester United and Liverpool. Another feature launching in the game is the "Attack Dribble," a new fast paced mode and feature for five-a-side. "Attack Dribble" is an all out offensive mode where you'll compete to score by passing and dribbling. You'll play in full-pitch, three-a-side matches on five-minute knockout timed rounds. No magic tricks, no deflections or team defence. Instead, you'll create attacks and score by dribbling and passing. Challenge your friends in up to three game modes, including Elimination, Last Man, and of course, Pass and Dribble. A new "My Team" section was also unveiled, which gives you the ability to organise and customise the team settings in FIFA 22, as well as share those teams with your friends. Customise kits, manager's players and more in order to define your own style of play. "New Playmaker" controls were also unveiled, allowing you to send your teammates a short message at the perfect moment. New Editor FIFA Editor captures a compilation of all actions a player did in the entire match and allows you to rewind and slow down the action to discover new tactics and techniques. FIFA Pre-Match FIFA Pre-Match is an all-new AI assistant that can help you navigate the off-pitch content and the scoreboard. The Pre-Match will open the Playbook Menu and allows you to pre-configure your team and see the other teams tactics before you step on the field. Intelligent Substitutions FIFA 22 introduces a new feature, which attempts to replicate the unpredictability and chaos of real-life football. When you and your opponent play the final part of a match, up to four players can be substituted. Intelligent Substitutions analysis the type of player you are, their position and the opposition team for further performance boosts

Fifa 22

FIFA is the world's biggest and most popular club soccer video game. Developed by EA Canada and published by Electronic Arts Inc. FIFA 21 is the debut of the improved Frostbite engine and the long-awaited, completely redesigned EA SPORTS FIFA development cycle. Over the past three years, the Frostbite engine has changed how players experience gameplay, allowing them to play, create and even share their skills – and add dynamic camera work, new crowds, depth of field and lighting effects for a more realistic gaming environment. In FIFA, it's all about your feet. A new, ultra-responsive gameplay system allows players to make pinpoint, world-class touches on the ball and make acute decisions on the run, creating a new level of understanding between players and the ever-changing momentum of the game. And the balls in FIFA move, spin and behave like the real thing, improving consistency and accuracy of passes and shots. The game features a broad variety of matches and competitions featuring some of the world's best teams and competitions, including two new Women's World Cup™ events, the highly anticipated Copa América Centenario and events in North America, Asia, Europe, Oceania and Africa. New Teammate AI FIFA will offer the first, second and third-person experience through new mechanics and features, including the ability to take over the role of your teammates as a CPU player. This allows you to feel more immersed in the game, teaming up on the pitch with your fellow teammates and playing the game with a more human feel. In FIFA, you can take control of your teammates at any time on the pitch, and gain up to three additional players, so your game and play is never one dimensional. A new "Teammate AI" system shows how your teammates play at different stages of possession and also changes their play style. They will perform specific actions based on the situation they're in. For example, an attacking teammate might keep the ball moving towards the goal by looking for a pass, whereas defenders will be more likely to try and stop you. The presence of AI teammates gives players an extra layer of control over their game, as they can use the offside trap to play one-touch football when they have the ball or make intelligent runs forward, look up at the goal, and finally lob a defender on their way to a goal- bc9d6d6daa
